

BRIGHTLIFE-800™

The first of OptoLum's super output, super long life lamps empowers lighting manufacturers and end users to incorporate LED lighting into existing light fixtures as well as new designs. BrightLife-800™ emits more than 800 lumens over a full 360 degree span, in other words, it emits the same light over the same area as the incandescent and compact fluorescent lamps that are in use today. OptoLum's BrightLife-800™ uses significantly less energy than incandescent sources while producing the same light, essentially paying for itself. Additionally, BrightLife-800™ boasts a 50,000 hour median life and a 100,000 hour useful life which is more than 50 times greater than incandescent and 5 to 7 times greater than compact fluorescent alternatives.
